Fuel

This isometric line drawing illustrates a fuel tank assembly. The main component is a rectangular fuel tank with rounded corners. A horizontal fuel filler neck is attached to the left side of the tank, featuring a cylindrical cap with a textured grip. The right side of the tank is connected to a complex manifold system, which includes two large, semi-circular ports and a central vertical pipe. Several screws are shown securing the various components of the assembly. The word "Fuel" is prominently displayed in the center of the tank's top surface.

Fuel

Features & Finishes

1. Lid

- a. Silver Anodized (Standard)
- b. Black Powdercoat (With Surcharge)
- c. Veneer (Fuel 95 & 98 ONLY. Not by TW)
